

FOR IMMEDIATE RELEASE

Rover Technology Fusions Announces New Strategic Partner

(Tampa, FL – April 25, 2011) – Rover Technology Fusions (RTF), the leader in forms driven workflow solutions, RoverINK, announced their newest value added partnership today, Graffen Integrated Business Solutions, of Conshohocken, PA. Graffen brings 5 Decades of experience to the Rover family and a synergistic focus on two key markets, Health Care and Legal.

“Their prestigious list of clients and customer centric business philosophy speaks for itself. We are completely synergistic in our approach to solving business problems, maintaining a high level of customer satisfaction, and delivering, not just state of the art technology solutions, but a high level of consultative domain expertise to the customers we serve.” said Robert Letzeisen, Executive Vice President, RTF. “We are proud that Graffen has chosen to represent the RoverINK portfolio as an integral part of their solution portfolio. RoverINK meshes extremely well with their best of breed offerings of dictation and transcription tools. Their mission statement conveys the spirit of their organization and their approach to solving business problems. The RoverINK products, especially those based on the Anoto digital pen will be an excellent fit for their customers” he went on to say.

“To use our vast industry experience and expertise to help our customers integrate technology into their core business objectives in order to streamline organizational processes, reduce costs, and gain an edge on their competition” are not just words stated Jason Vitz, Director of Business Development, Graffen Integrated Business Solutions. “RoverINK provides our customers with an opportunity to spend more time serving their constituents and less time processing data.” He goes on to say, “We are excited about being able to provide a solution that benefits so many people. For example, within health care not only is the provider more cost efficient, able to address regulations and able to continue using their current, preferred methods of data capture, but patients receive better care, which is greatly dependent on acquiring timely, accurate information.”
