

FOR IMMEDIATE RELEASE

Rover Technology Fusions™ Announces Selection by Florida Medical Clinic of Rover's Clinical Documentation Solution

Tampa, FL – June 10, 2011 – Rover Technology Fusions (“Rover”), the industry leader in forms driven workflow and mobile data capture solutions, RoverINK™, today announced that Florida Medical Clinic (“Florida Medical”), a multi-specialty physician group, has selected Rover’s data capture and clinical documentation solution (the “CURE”) for planned use by Florida Medical’s business and clinical users, as well as patients..

Established in 1993, Florida Medical currently has over 100 physicians and specialists as well as over 800 skilled medical professionals providing patient care through its network of 17 locations throughout Hillsborough and Pasco Counties, Florida. In managing its growing patient base, Florida Medical utilizes the Sage Intergy electronic health record (EHR) throughout its 17 locations to manage patient records. Gus Taylor, Chief Administrative Officer of Florida Medical, stated, “efficient and effective patient services with a mantra of safety have and will continue to be the cornerstones of Florida Medical’s philosophy and our business model is designed for comprehensive quality of care and service to our patients. Any product utilized by Florida Medical must meet our standards as well as positively impact our providers and patients alike.” In selecting the Rover CURE solution, Taylor noted that “Rover offers the most complete and sophisticated data capture and clinical documentation solution at the point of care in the health care field today.” Taylor also noted “RoverINK quickly delivered the proof that handwritten data could be quickly converted to XML and represent the appropriate Medcin codes for updates to our Sage Intergy EHR, as well as an instant PDF for document management which will clearly deliver additional efficiencies to our organization.”

“Rover has long focused on developing solutions to facilitate more widespread adoption of EHRs, with particular emphasis on clinical documentation at the point of care,” said Robert Letzeisen, EVP of Rover. According to Letzeisen, the RoverINK™ solution offers a clinically intuitive means for achieving faster and more accurate documentation of patient information into existing EHRs. Clinicians (and physician groups like Florida Medical) are demanding solutions that enable them to capture patient data at the point of care without changing the manner in which they practice medicine. Our solution is unique in that it offers clinicians the choice of any input device when documenting patient care, including incorporating handwriting, such as free form Clinical notes, through the use of **Anoto™** digital pens, voice using BayScribe dictation tools, fixed keyboards, Tablets and even iPads for data capture.”

More About Rover Technology Fusions

Rover Technology Fusions (“Rover”) is a form driven work flow solutions provider offering a robust portfolio of products and services to business. RTF develops and integrates, through RoverINK™, Export Templates, affordable mobile data technologies that connect patients to their care providers, and businesses with their customers.
